

Bronwyn Cooper is a “specialised generalist” podiatrist, lower limb clinician, clinical educator and photobiomodulator.

She has pioneered the use of high-power laser therapy (PBM) in mainstream podiatry practice for over 6 years, which has further developed her interest in chronic pain, including nerve pain. Her passion for restoring correct movement patterns - including for arthritic patients - via dynamic (“instability to create stability”) footgear therapy, with both shoes and in-shoe devices, started in 2004.

Bronwyn’s presentations include:

- IVO 2012 (International Medical Footwear Conference)
- PodoCon 2021 – the Indian Diabetic Foot Conference
- Australian Medical Laser Association (AMLA, now AMPA)
- Heal With Laser seminars/webinars
- “Clinical Gems” – her own webinar series in 2020 and 2021

She has run industry workshops on laser therapy. In 2019, she had 2 articles on PBM in clinical practice published in APodA’s “Stride Magazine”.

Bronwyn has been a full-time Podiatry educator, runs a full-time private practice, with sessional Public Sector plus expert opinions for medico-legal matters. She has been an active contributor to her own professional association as well as SMA, AMLA and more.

Bronwyn’s 2021 highlights include attending the World Association on Laser Therapy (WALT) conference, and speaking at PodoCon 2021, hosted in India. Her fun/career highlight was being the event podiatrist for the Great Walk to Beijing in 2008 – and the study tour on medical laser to Italy in 2018 was a close second!

Disclaimer: Bronwyn acts as a clinical consultant for Heal With Laser and is the Australasian distributor of Barefoot Science.
